PROFESSIONAL SUMMARY

I'm a Computer Engineering student with a strong interest in Linux systems, IT infrastructure, and cybersecurity. Alongside my studies, I'm proficient in Python, SQL, and Git; experienced in cloud deployment and open-source tools. I've gained hands-on experience with Ubuntu Linux distribution, administering Atlassian tools, and managing VPN, domain, and DNS configurations, Python scripting, cloud dashboards, and full-stack projects, which gave me a solid foundation in automation and troubleshooting. I enjoy learning how systems work under the hood — from setting up servers and monitoring logs to making sure things run securely and efficiently. I'm excited about growing my skills in Linux administration and internal projects, while contributing to a global team and learning from real-world challenges.

EDUCATION

Ankara UNIVERSITY

Bachelor of Engineering

Major in Computer Engineering

Relevant Coursework: Database Systems; Software Engineering; Operating Systems; Algorithms; Wireless Networks

Karabük, Türkiye

Expected Jul 2027

WORK EXPERIENCE

uTest (Applause)

Crowdsourced Tester

Remote

Jan 2024 – Present

- Participated in diverse testing projects, including AI chatbot validation, web & mobile app usability, image classification, and functional testing.
- Reported software bugs, UI/UX issues, and performance problems across different platforms.
- Conducted test case validation for system responses and edge-case scenarios.

VivioTech

Market & Partnership Analyst

Remote, Russia

Aug 2022 – May 2023

- Researched and identified over 70 potential partners and buyers in the Turkish market, resulting in 10 qualified leads
- Collected and analyzed market data from over 30 sources to evaluate trends and competitor positioning

PROJECTS

IT & INFRASTRUCTURE AUTOMATION PROJECTS

- Created an interactive Streamlit dashboard using Pandas, Plotly, and Matplotlib for real-time course tracking; integrated with Google Sheets API and deployed on Google Cloud
- Developed 10+ Python automation apps including a hospital DB system, bank manager, email slicer, password manager, and voting simulator—focused on data processing, logic handling, and modular design

FULL-STACK & DATABASE PROJECTS – ENGLISH SCHOOL SYSTEM

Mar 2025

- Built a full-stack education platform using HTML, CSS, JavaScript, AJAX, PHP, and MySQL for user registration, scheduling
- Designed and built a normalized Oracle database from scratch; imported 200 sample records and implemented stored procedures, triggers, and constraints for business logic
- Wrote 20 complex SQL queries (joins, aggregations, subqueries) and built backend features.

ACTIVITIES

Hackathon Participant – IT_ONE Cup: ML/Data Infrastructure Challenge

Online Apr 2025

- Collaborated with team members using Git and Linux-based tools to design and optimize data pipelines.
- Focused on data preprocessing, feature engineering, and efficient resource handling in a Linux environment.
- Gained experience in working remotely with an agile team on a large-scale technical challenge.

SKILLS

Tech Skills: JavaScript, HTML, CSS · Python, C++, PHP, SQL, NoSQL · Pandas, AJAX, Git, Bash, User & permissions management, Networking basics (TCP/IP, DNS, VPN) · PostgreSQL, MySQL, Oracle · GitHub · Google Cloud · Data processing, Network monitoring

Soft Skills: Analytical thinking, problem-solving, attention to detail, communication, adaptability, collaboration, time management, accountability, integrity, teamwork, results-oriented, eagerness to learn

Languages: Russian Native · English Fluent · Turkish Fluent · Chinese Advanced
